

# Curriculum Vitae

Name: Na Rae de Jong  
Address: Graaf Florisweg 69, 2805 AG Gouda  
Birthdate: August 17<sup>th</sup> 1984  
Email: [narae@checkmark.nl](mailto:narae@checkmark.nl)  
Phone: +31 (0)182 590 217 // +31 (0)6 12345678  
Nationality: Dutch  
LinkedIn: <http://nl.linkedin.com/in/naraedejong>

## Personal Profile

A motivated, enthusiastic and creative scientist looking for a challenging position in the pharmaceutical industry. Specialized in genetics and enjoys working in a team with several scientific disciplines. A hard-worker, result driven and willing to learn.

## Relevant work experience

Sep 2010 - Nov 2014 **Utrecht University**, the Netherlands

### *PhD Genetics*

- Genetic study in relation with aging, osteoarthritis, and pain, based on data of the Rotterdam Study: a prospective, population-based cohort study.
- Collaboration with many other scientists working on genetics over the world.
- Facilitated by the Genetic Laboratory of the Department of Internal Medicine specialized in complex diseases in the elderly, such as osteoporosis and osteoarthritis.
- Techniques used: PCR, cell culture, DNA/RNA isolation

Nov 2009 – May 2010 **DNage Rotterdam**, the Netherlands

### *Master Internship*

- Research on aging mice and writing some scripts providing researchers the opportunity to measure retina thickness and calculate amounts and sizes of liver nuclei.
- Techniques used: isolation of mice femurs, RNA isolation in liver, sectioning of mice eyes, photographing of eye sections

Dec 2008 – Oct 2009 **Erasmus Medical Center**, dept. Internal Medicine, Genetic Laboratory, Rotterdam, the Netherlands

### *Master Internship*

- Research on how to prioritize Genome Wide Association Study (GWAS) results by fusing genomic and functional information
- Techniques used: Use of GWAS data, functional databases such as Ensembl, TAMAL, and GO, and the programming languages Perl and R

Nov 2006 - May 2007 **Utrecht University**, Hubrecht Laboratory, the Netherlands  
*Bachelor Internship*

- Studying HOX gene regulation and the effect on limb growth. Using zebrafish embryo's and fluorescent tags
- Techniques used: Fluorescence microscopy, cloning, DNA/RNA isolation, PCR

## Education

2010-2014 **PhD in Human Genetics**, Utrecht University  
*thesis defended in 2014*

2007-2010 **MSc Biomedical Sciences**, Utrecht University  
*degree obtained*

2005-2007 **BSc Biology**, University College Utrecht  
*degree obtained*

## Courses

2013 Scientific writing  
2014 English for scientists

## Software skills

Xcalibur, Mascot, Biowork, scaffold, Proteom Discoveror

## Languages

Dutch Native  
English Fluent

## Extracurricular activities

2015 Organization and budget for PhD retreat University Utrecht  
2007-2010 Member of the student association Mebiose  
2008-2009 Student aid for first year Biology students

## Other work experience

2006-2010 **CMS-Derks Star Busmann**  
*Receptionist*  
- incoming phone calls, booking conference rooms

**Hobbies**

Boardgames, reading, sea kayaking, travel

**Publications**
